RITOUET, NICOLAS

ABOUT ME

Passionate software engineer, I'm keen proponent of **continuous learning**, **agile** methods and **automation**.
Over the years, I've reached a robust and deep understanding of web technologies in almost every tier (frontend with AngularJS, HTML5 – backend with JEE7, Play!, NodeJS and middleware like Solr, Kafka and websockets).
I'm **a free software** end-user and supporter, contributor to some open source project (Jhipster, deployd) and creator of modest open source projects (Yeoman generators, NodeJs module, etc…). Take a look at my github account for more insights (https://github.com/NicolasRitouet)
My 2 lasts pet projects involved lots of angularJS custom services and even more custom directives.

EXPERIENCE

February 2013 **now**	**Zanox.de AG · Berlin - Germany** *Affiliate marketing network*	**Senior software engineer** 13 months
	Migrate our old backend service to a new backend stack, based on JEE6.
